

Environmental, Social, and Governance Policy

- Waste reduction: Art of the Event focuses on reusing, reinventing, and restoring existing props and other event materials whenever practicable to ensure we produce limited waste.
- Energy efficiency: based on investigations to date, our largest source of environmental impact is our warehouse. To help mitigate this impact, we have standard energy reduction practices in place (turning off lights, using energy saving bulbs, HVAC temperature controls, etc.).
- Sustainable sourcing: when fabricating props or other event decor, we utilize environmentally friendly materials that are ethically sourced – including FSC certified wood (harvested from sustainable, well-managed forests) and non-oil based paints. We focus on utilizing materials that can be recycled or reused wherever possible.
- Green Products and Packaging: If packaging is required for our materials for shipment or transit, they are placed in recyclable boxes that we reuse year-over-year. Large props are packed with reusable materials (e.g., padded moving blankets). Perishable items (like floral arrangements) are donated.
- Future Goals: Ownership is currently researching investing in carbon offsets to help further reduce our carbon footprint.
